

Deep learning

Introduction

Hamid Beigy

Sharif University of Technology

October 30, 2021

1. Course Information
2. Introduction
3. Success stories
4. Outline of course
5. References

Course Information

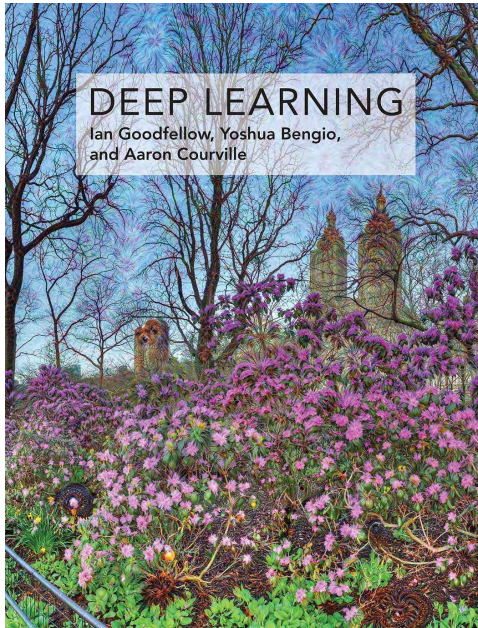

1. Course name : Deep learning
2. The objective of **deep learning** is moving **Machine Learning** closer to one of its original goals: **Artificial Intelligence**.
3. Instructor : Hamid Beigy
Email : beigy@sharif.edu
4. Class Link: <https://vc.sharif.edu/ch/beigy>
5. Course Website: <http://ce.sharif.edu/courses/00-01/1/ce719-1/>
<http://sharif.edu/~beigy/14001-40719.html>
6. Lectures: Sat-Mon (10:30-12:30)
7. TAs : Fariba Lotfi Email: flotfi@ce.sharif.edu
Aryan Sadeghi Email: aryansadeghi1374@gmail.com

► Evaluation:

Mid-term exam	20%	1400-09-24	
Final exam	25%	1400-11-04	
Practical Assignments	35%		
Quiz	15%		
Paper	5%	1400-09-24	Hard deadline for selection

Introduction

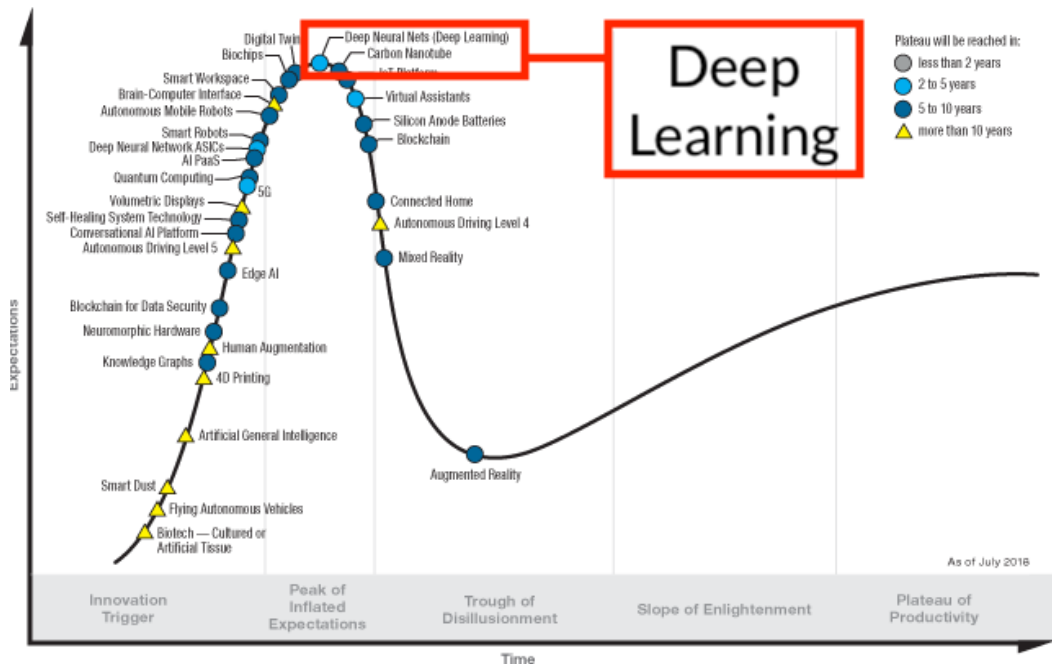

Gartner Hype-Cycle of Emerging Technologies (2016)

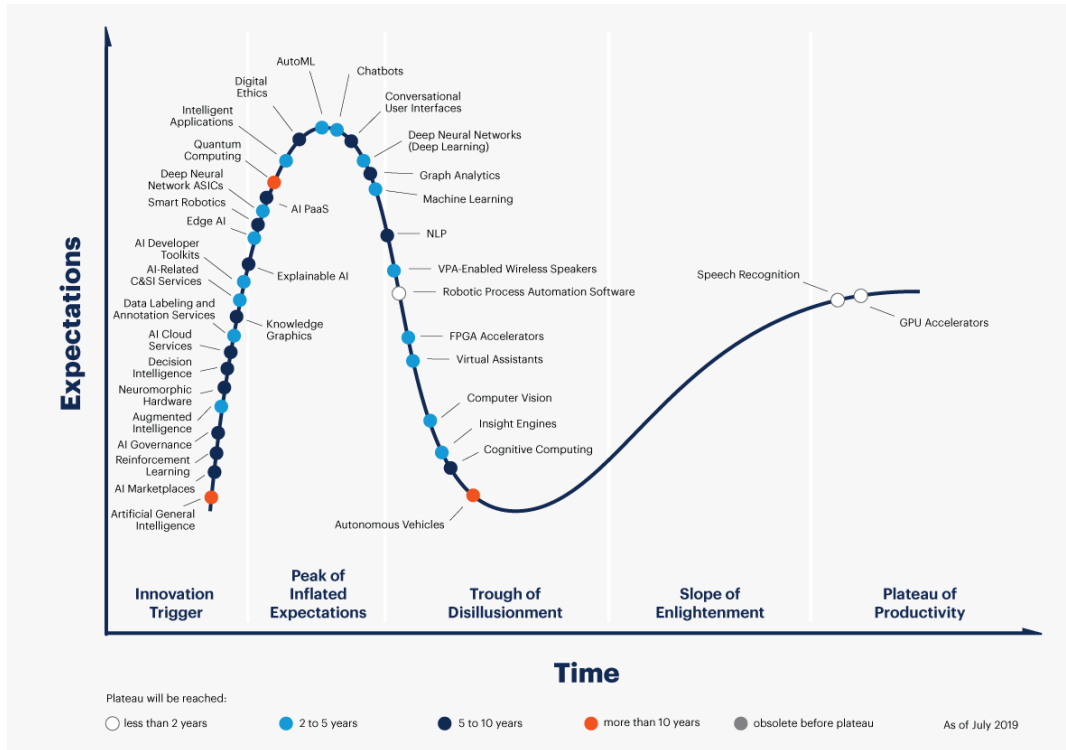

Gartner Hype-Cycle of Emerging Technologies (2017)

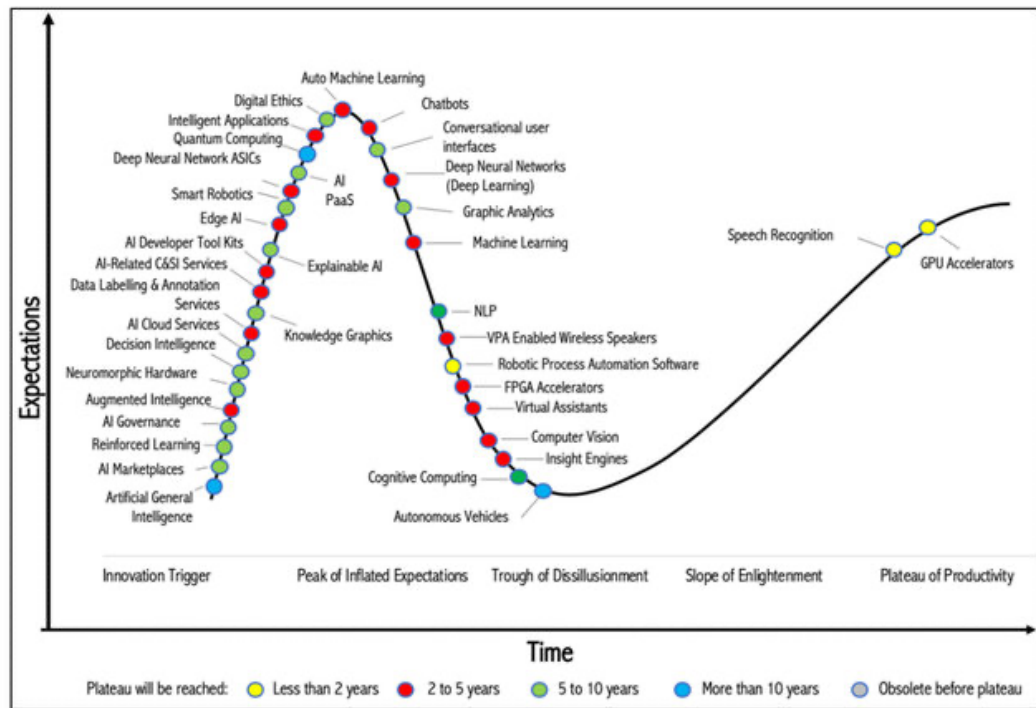

Gartner Hype-Cycle of Emerging Technologies (2018)

Gartner Hype-Cycle of Emerging Technologies (2019)

Gartner Hype-Cycle of Emerging Technologies (2020)

Deep learning has various closely related definitions or high-level descriptions.

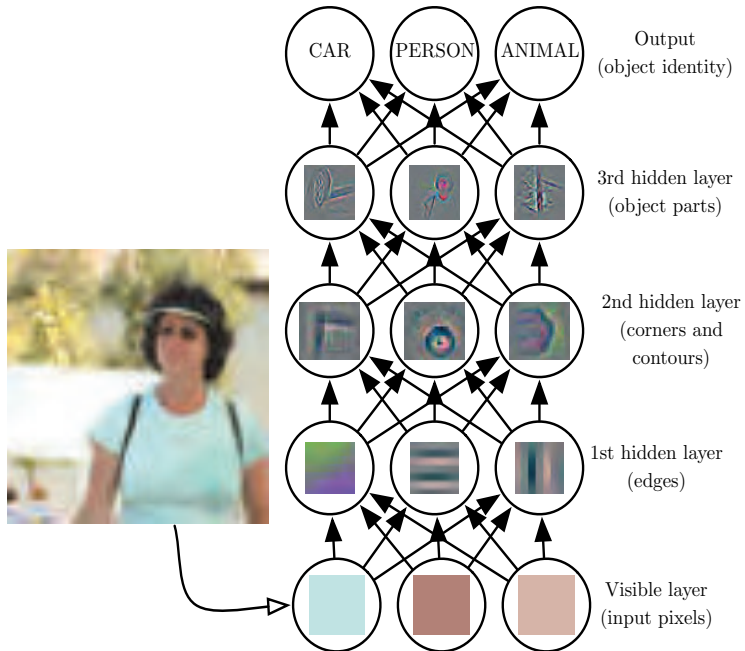

Definition (Deep learning)

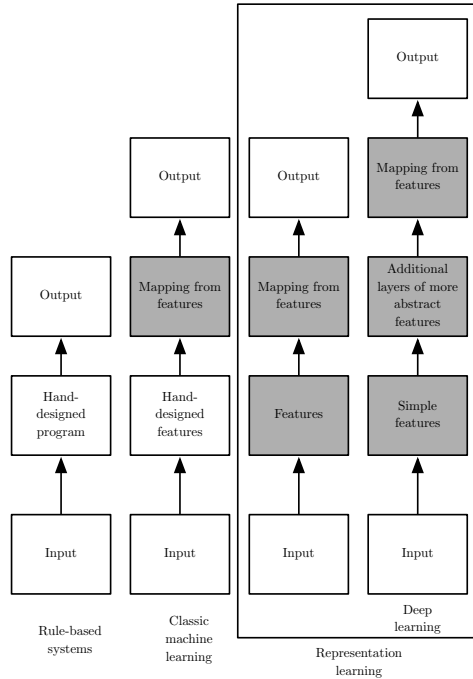

A sub-field of machine learning that is based on

- ▶ learning several levels of representations, corresponding to a hierarchy of features or factors or concepts,
- ▶ where
 - ▶ higher-level concepts are defined from lower-level ones, and
 - ▶ the same lower-level concepts can help to define many higher-level concepts.

Definition (Deep learning)

- ▶ Deep learning is part of a broader family of machine learning methods based on learning representations.
- ▶ An observation (e.g., an image) can be represented in many ways (e.g., a vector of pixels), but some representations make it easier to learn tasks of interest (e.g., is this the image of a human face?) from examples, and research in this area attempts to define what makes better representations and how to learn them.

Common among the various high-level descriptions of deep learning are two key aspects:

1. Models consisting of **multiple layers/stages** of **nonlinear information processing**
2. Methods for supervised or unsupervised learning of feature representation at successively higher, more abstract layers.

Deep learning is in the intersections among the research areas of

1. Neural networks
2. Artificial intelligence
3. Graphical modeling
4. Optimization
5. Pattern recognition
6. Signal processing.

Success stories

1. Finding nearest images

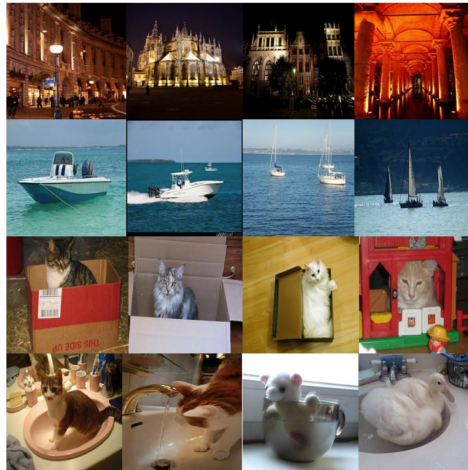

- day + night =

- flying + sailing =

- bowl + box =

- box + bowl =

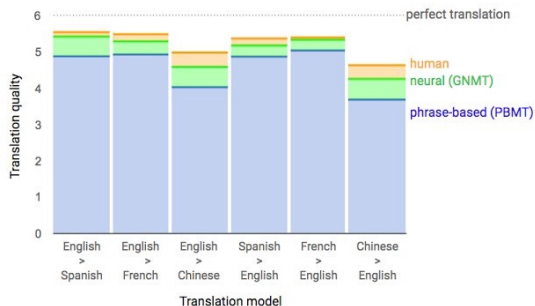

Nearest Images

¹This slide is taken from Prof. Ghodsi's slides.

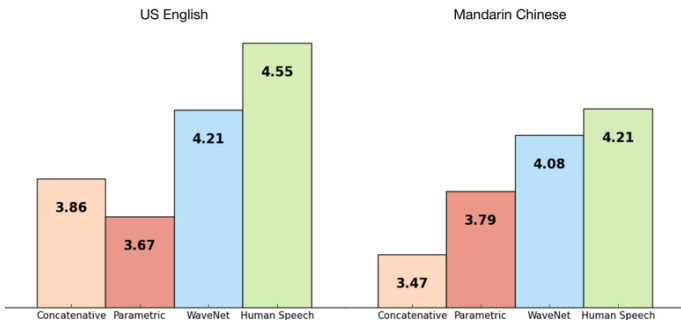

1. **Word2vec** (Mikolov et al. 2013).
king – man + woman = queen
2. Google neural machine translation²

1. Wavenet : Generating voice ³

2. Lip Reading

³Borrowed from <https://blog.statsbot.co/deep-learning-achievements-4c563e034257>

1. **LeNet-5**

LeNet-5 is designed for handwritten and machine-printed character recognition

Live demo : <http://yann.lecun.com/exdb/lenet/index.html>

2. **Sentiment Trees**

Predicting the sentiment of movie reviews.

Live demo : <http://nlp.stanford.edu:8080/sentiment/rntnDemo.html>

1. TD-Gammon
2. DQN in Atari
3. Deep RL in Robotics
4. Alpha Go and Alpha Zero
5. Dota2 (Video Game)

Outline of course

1. Introduction
2. Review of machine learning and history of deep learning
3. Multi-layer Perceptrons and Backpropagation (MLP)
4. Optimization and Regularization
5. Convolutional networks (CNN)
6. Recurrent networks (RNN)
7. Sum-Product networks (SPN)
8. Dual learning
9. Deep reinforcement learning (Deep RL)
10. Representation learning
11. Deep generative models
12. Graph convolutional networks (GCN)
13. Applications
 - ▶ Text mining and natural language processing
 - ▶ Computer vision
 - ▶ Social networks
14. Advanced topics
